At Englobe, we dare to rethink the way we do things. We care deeply about tangible, practical change that makes the future better. We exist to help our Clients and our communities build sustainability. Every project counts. Every day.

Englobe is a leading provider of specialty environmental and engineering services, supporting infrastructure development for public and private sector Clients. We have highly experienced and specialized teams, equipment, offices, certified laboratory facilities and soil treatment centres across Canada, the United Kingdom and France. We are conveniently located in your market to support all your large and small projects from start to finish in any way we can.

Since 2016, our facilities at the reclamation center allow us to meet the local needs of our clients by offering the possibility of storing contaminated soil on site for reclamation, in accordance with the Guide d'intervention and the laws and regulations in effect at the MELCC. In addition, Englobe offers its clients the possibility of obtaining topsoil from our point of sale for their different uses in their projects. Eco-products with added value that are both ecological and economical.
