

Soil burial site : L'Épiphanie

160, Saulnier street

Laval (Quebec) H7M 2Y2

Phone : 1.866.981.0191, ext. 115113

At Englobe, we dare to rethink the way we do things. We care deeply about tangible, practical change that makes the future better. We exist to help our Clients and our communities build sustainability. Every project counts. Every day.

Englobe is a leading provider of specialty environmental and engineering services, supporting infrastructure development for public and private sector Clients. We have highly experienced and specialized teams, equipment, offices, certified laboratory facilities and soil treatment centres across Canada, the United Kingdom and France. We are conveniently located in your market to support all your large and small projects from start to finish in any way we can.

This site was formerly operated for years as a sand pit, but had unfortunately reached the end of its life. The site is laid out in sections protected by a double-layered liner system, allowing for the proper containment of low-level contaminated soil. This site complies with the Contaminated Soil Landfill Regulation (CSLR). Once each section is filled, it will be covered by the same membrane. After seeding, the mound will become a green space and will be returned to the municipality for its own use.

SERVICES

- Low Contaminated Soil (< C) Landfill
- Soil traceability system
- Excavated soil characterization service (spill or incidental find)
- Production of required documents, including transportation manifests
- Backfill materials
- Soil reclamation.

ACCEPTED CONTAMINANTS

- All contaminants < C
- Soils containing asbestos

ENGLOBE
